

TechStore Inc.

SQL Data Analysis

The Business Situation

TechStore Inc. is a growing e-commerce company that operates across multiple countries and sells:

- Electronics
- furniture
- Accessories

Management wants to improve sales performance

CUSTOMERS

Who are our most valuable customers and where are they located?

PRODUCTS

Which products are driving sales, and are we stocked for demand?

SALES

Evaluate sales rep performance

SQL Analysis

The analysis was conducted in The SQL Server and I also used Excel for data visualisation.

QUERY

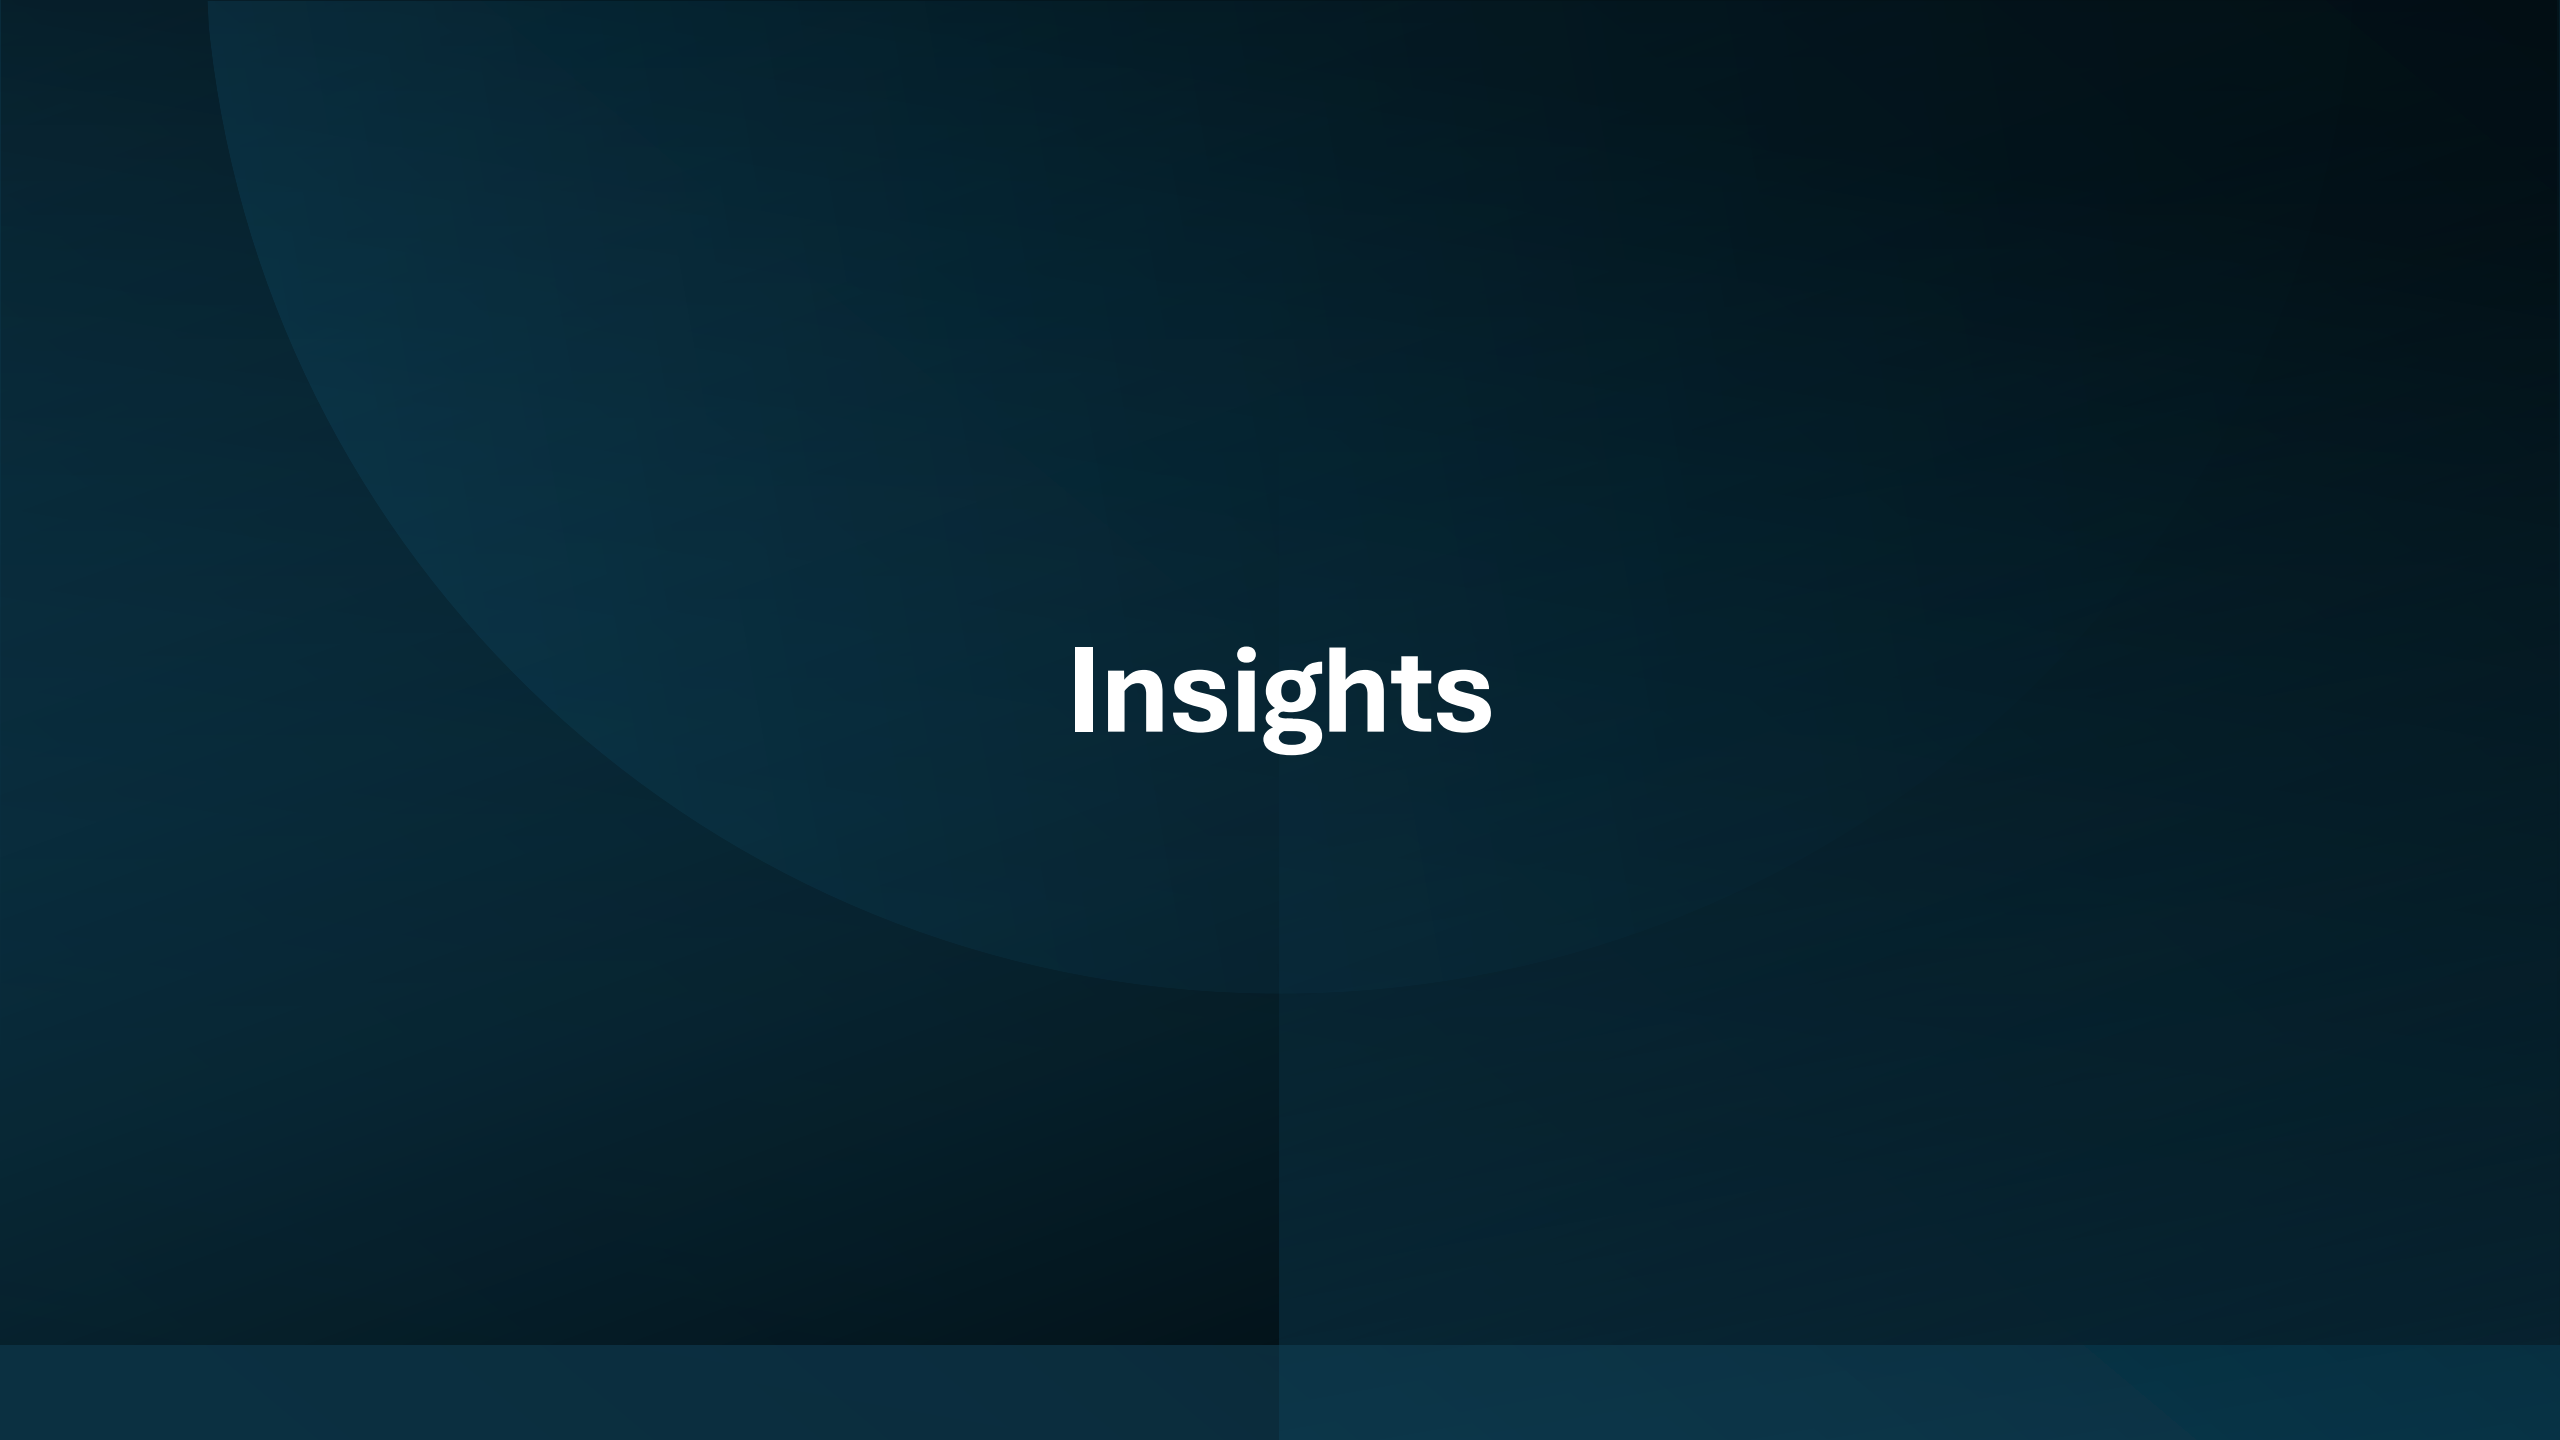

```
-- =====  
-- Top 10 Customers by Total Purchase Value  
-- =====  
SELECT TOP 10  
    o.CustomerID,  
    c.customername,  
    SUM(p.price * o.quantity) AS total_purchase_value  
FROM Orders AS o  
LEFT JOIN Products AS p  
    ON o.ProductID = p.ProductID  
LEFT JOIN Customers AS c  
    ON o.customerid = c.customerid  
GROUP BY  
    o.CustomerID,  
    c.CustomerName  
ORDER BY  
    SUM(p.price * o.quantity) DESC;
```

RESULT

	CustomerID	customername	total_purchase_value
1	1	John Smith	17280
2	11	Omar Hassan	15820
3	12	Emily Wilson	14570
4	2	Aisha Khan	13760
5	6	Fatima Ali	12840
6	4	Priya Patel	12580
7	8	Maria Garcia	11800
8	9	Luis Fernandez	11600
9	13	Rahul Mehta	11340
10	5	David Johnson	11300

Insights

John Smith is the highest-value customer at \$17K

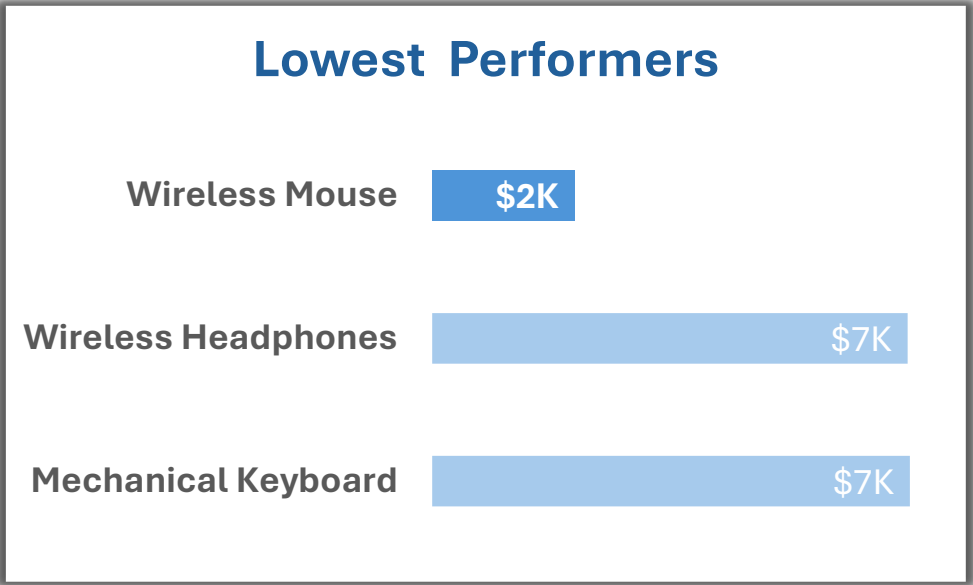

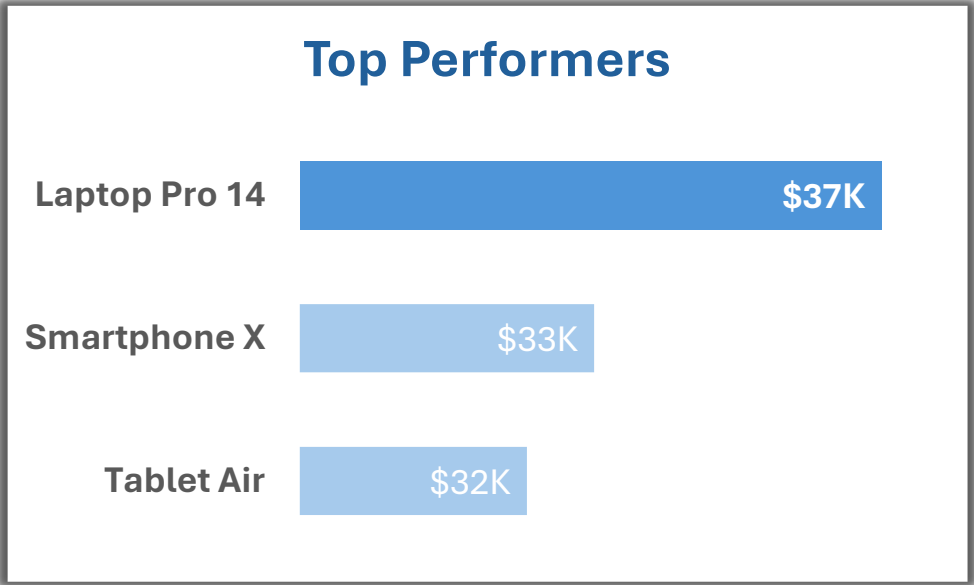

Top 10 Customers by Total Purchase Value

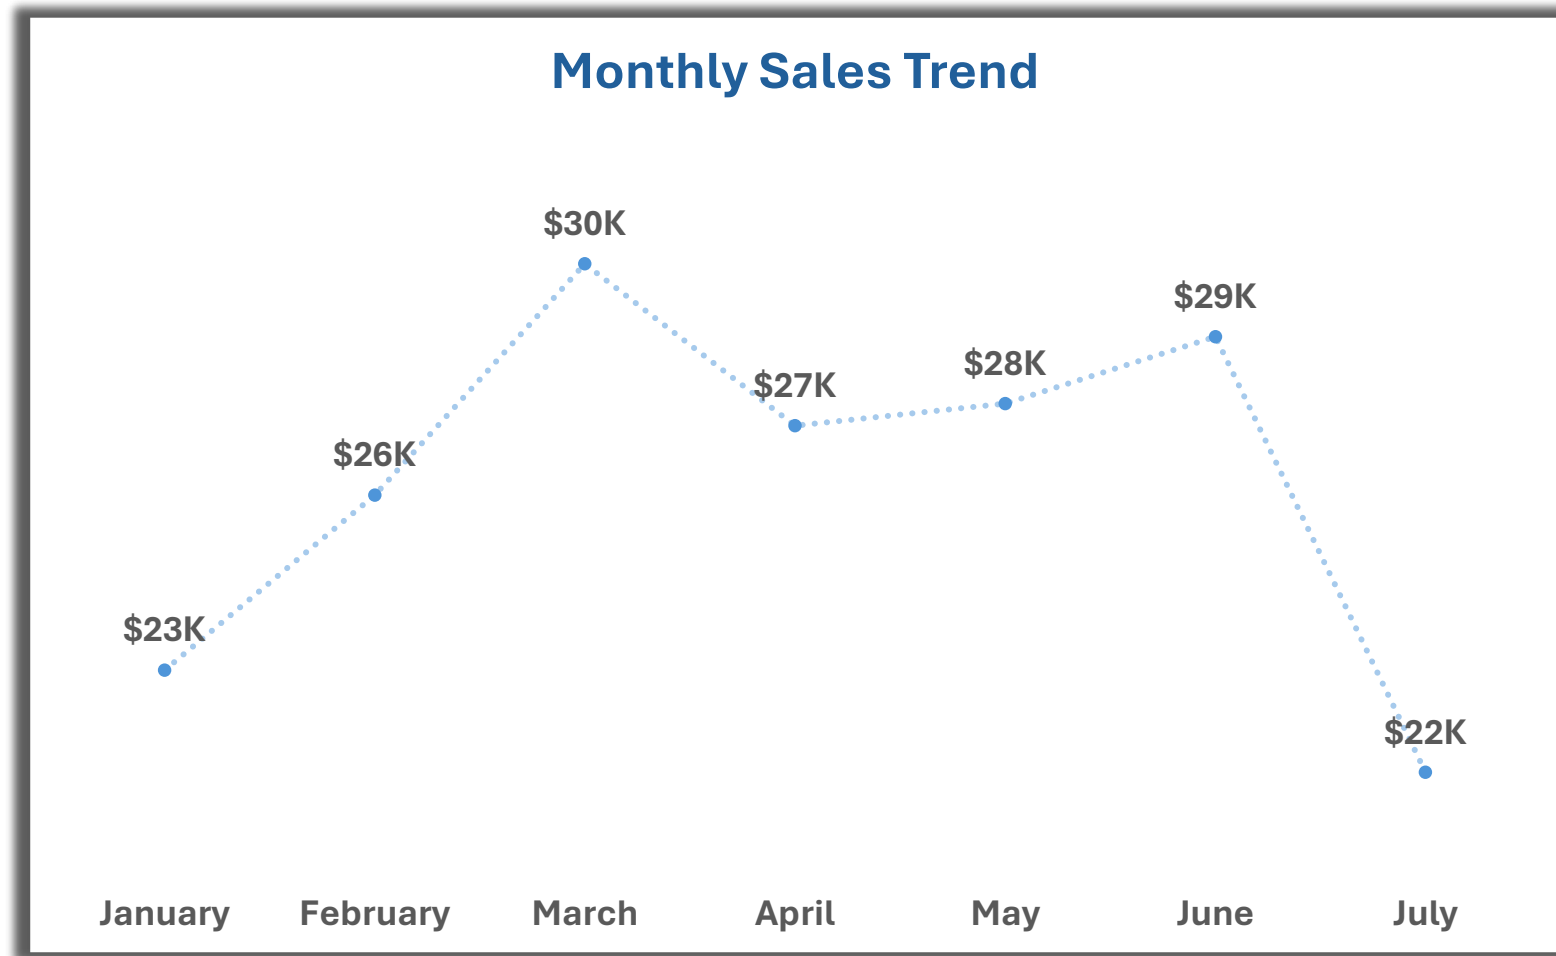

Revenue Is Led by One Market: **USA**

Country	Total Revenue
USA	\$27K

Laptop Pro 14 leads sales, while the Wireless Mouse significantly underperforms

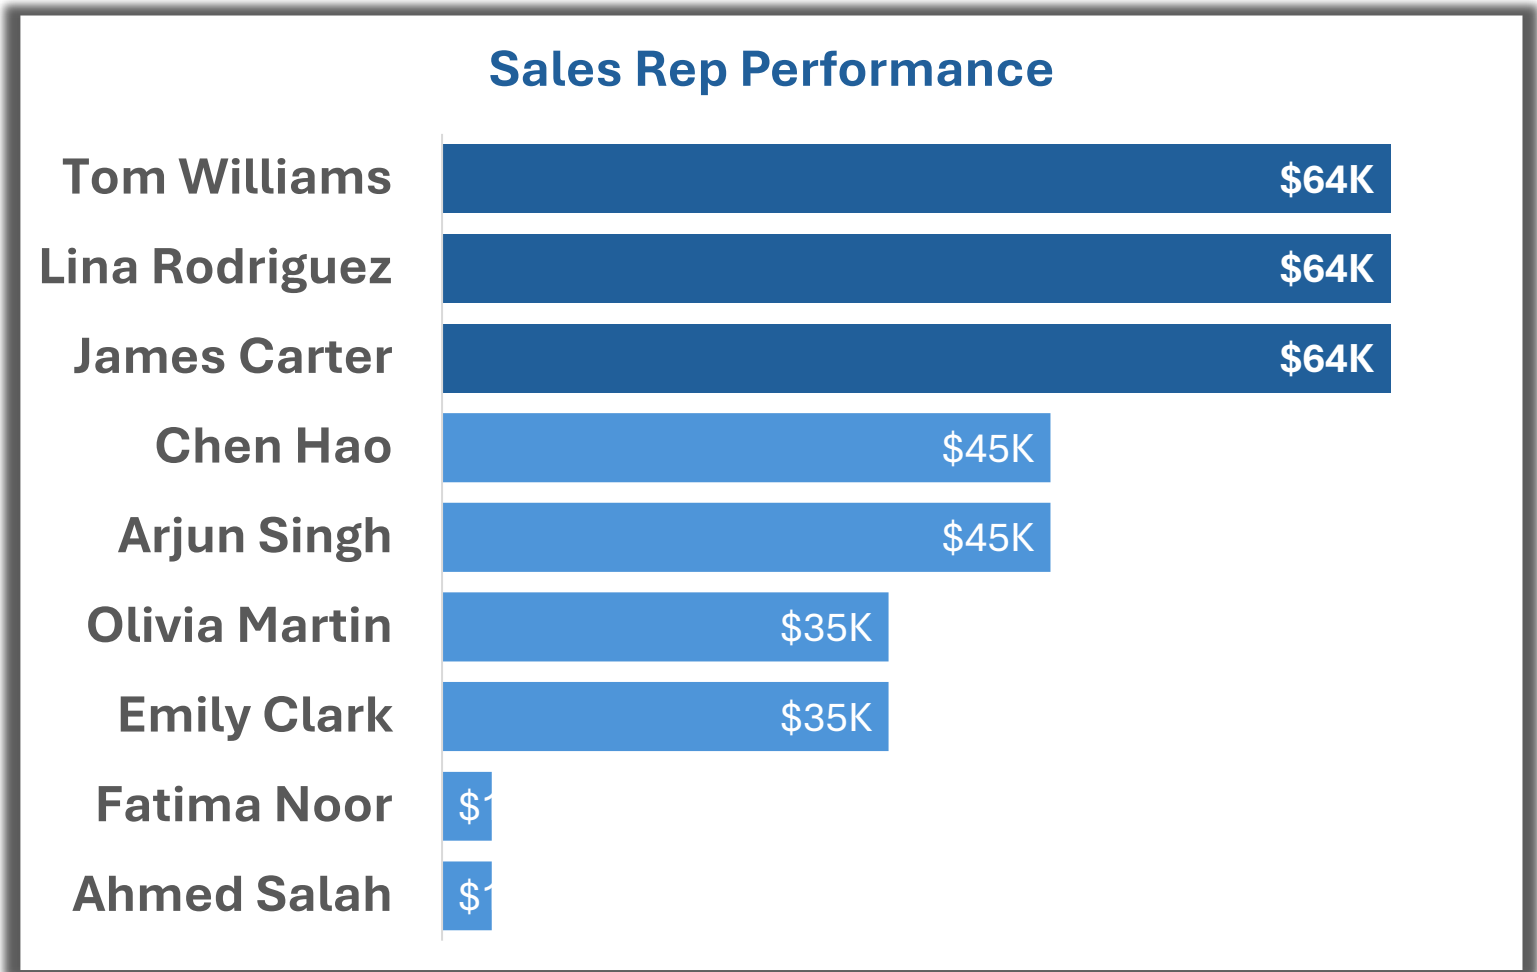

July sales drop to \$22K.

I suggest to **investigate** product category's **sales performance and customer reviews** during the sales drop

Sales Performance Varies across Reps

With Tom Williams leading in performance, Lina Rodriguez and James Carter are best performing sales reps

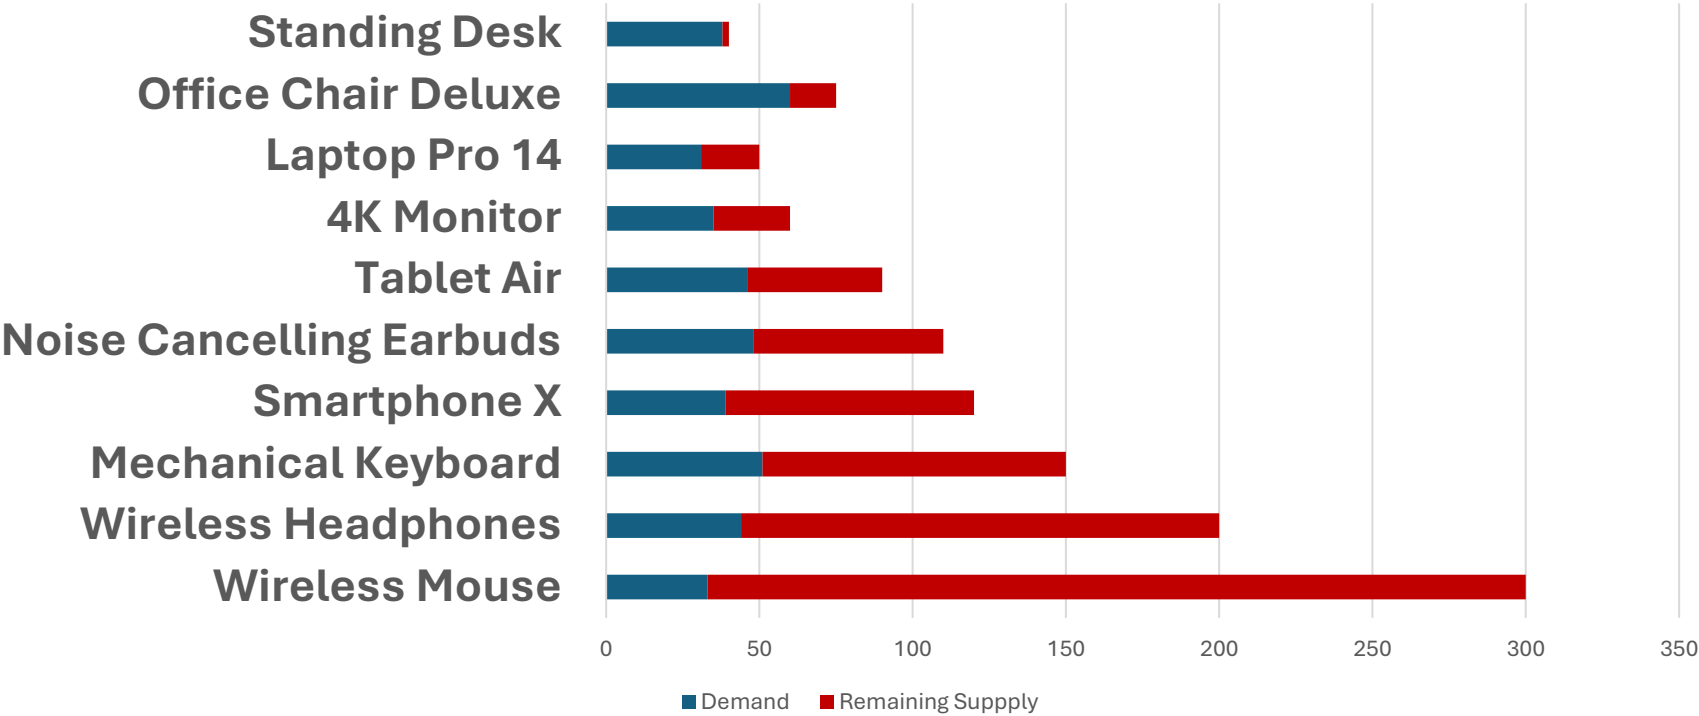

I suggest we **benchmark high performers and identify best practices** that can be repeated.

Top performers can also **train lower performing reps.**

SALES DEMAND RISKS EXCEEDING THE AVAILABLE STOCK

Demand vs Available Stock

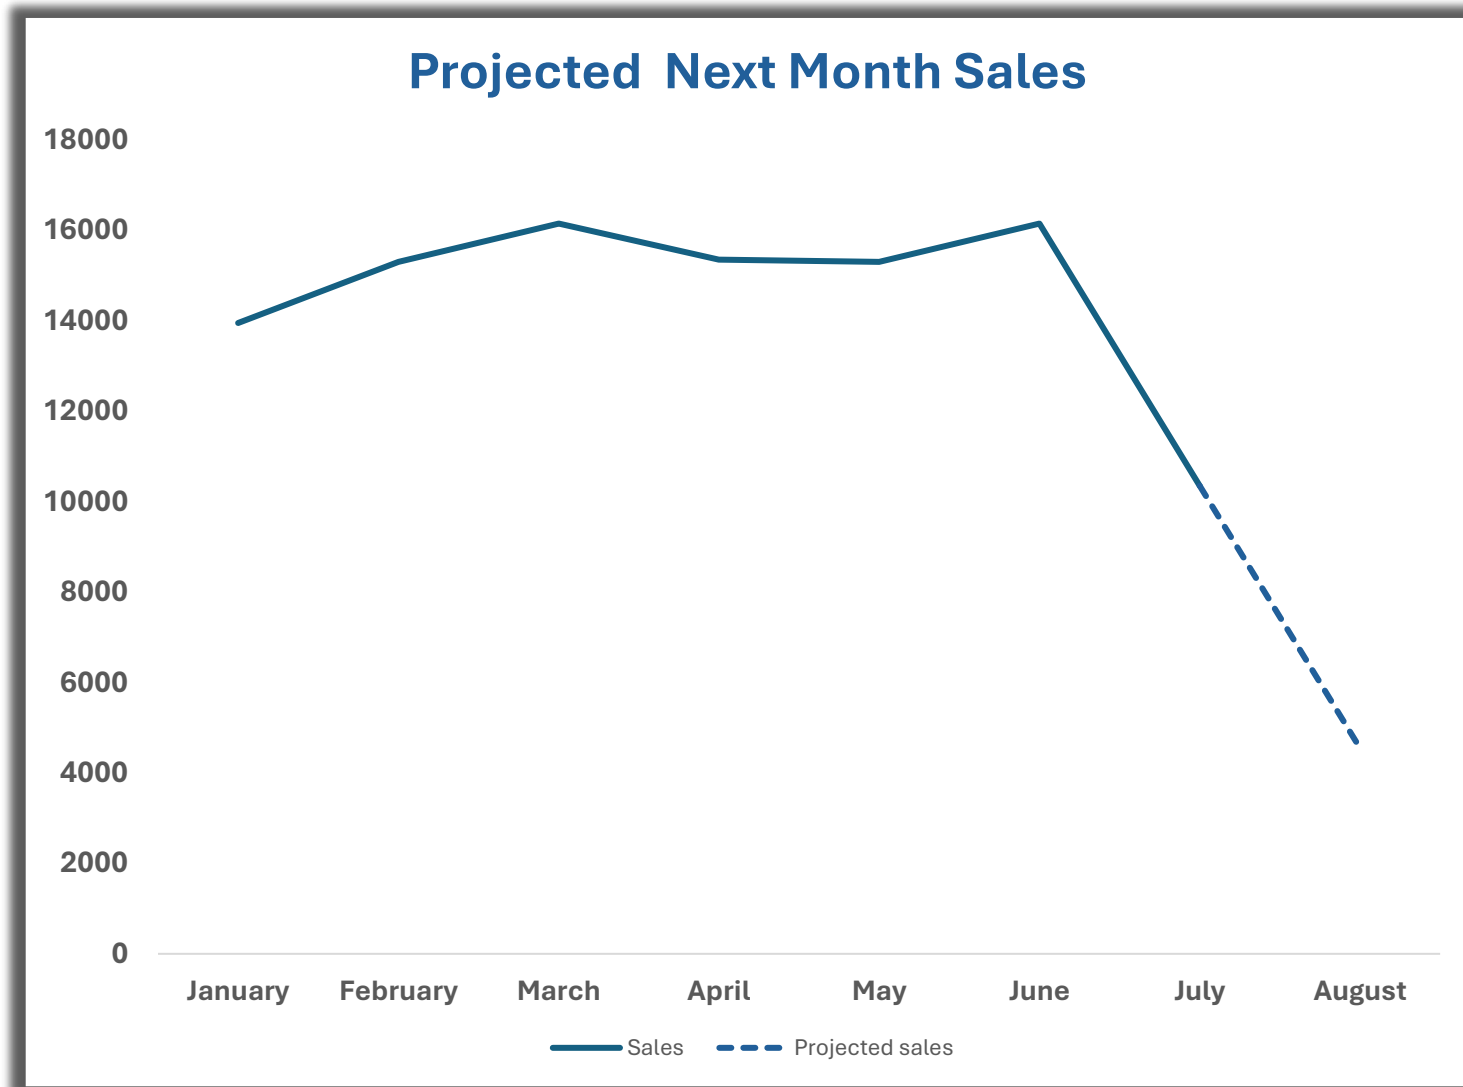

Standing desk

38 demands | 40 supply

Only 2 units remain

Planning Ahead

**! Illustrative
forecast**

Dataset ends in July 2024, so this is a demonstration of the forecasting method rather than a current prediction.

RECOMMENDATIONS

Recommendations

Data	Problem	Recommendaiton
USA leads regional sales at \$27K + With top costumers located there	Revenue relies mainly on USA markets	Protect revenue through offers for high value costumers, while evaluating situation in all markets
Standing Desk: 38 demand vs 40 stock + wireless mouse demand is below 50 and stock is 300	We have low stocks for high demands products and high stocks for low demand products	Prioritise restocking of products with smallest demand-stock gap and pausing the restock for low demand products
Sales: Jul \$22k vs Jun \$29K	Sales declined by approximately 25%	Investigate the decline , I suggest running a customer product review program for this analysis
Top 3 sales reps sales: ~\$65K	Clear performance gap between top sales rep and others	Replicate success by analysing their regions, customer mix and sales activity to identify practices that can be applied elsewhere.

Summary

We have

- Reviewed and analysed the sales performance data
- Identified the areas of improvements
- Developed data driven recommendations to boost sales performance

THANK YOU
